The valve was worked out for application in stock preparation installations and works successfully for over 40 years in the paper industry.

Main advantages:

- Precise and process stable control characteristic curve
- Wide control range
- Solid construction for regulating
- Self-cleaning segments
- Wear reducing flow axis
- Easy to maintain

Energy saving regulating without diminished cross section by valve body and/or fix folding or diaphragm parts.

Regulation of trash

1 off IRIS-diaphragm control valve type BS DN 100 P in stainless steel execution 1.4408/1.4435, serial no. B 13297.

Favourable, central flow axis:
